Let Us Help You Plan - No Job or Order Too Small

A WELL-PLANNED and planted home is the cherished hope of every American family. Pleasing and satisfactory results are only attained through a careful study of your grounds, the selection and planting of the proper material. Hundreds of Kentucky homes, both large and small, have been successfully landscaped from plans and service rendered by our firm. Because of our knowledge, experience and training we are in a position to serve you well. Satisfactory results are assured at surprisingly low cost. LET US HELP YOU

No Charge for Consultation at Nursery

There is no charge for consultation or suggestions at the nursery. If you will bring your plans, measurements, pictures, etc., we will be pleased to give you valuable assistance.

Making Landscape Plans

We make no charge for small, simple plans in Lexington provided we furnish the nursery stock.

Such plans in cities close by (within 30 to 35 miles) are also made free of charge provided sufficient stock is purchased to justify the time and trip required.

A nominal charge is made for plans and consultation for clients farther away, based on distance, time required, etc.

PLANS BY MAIL. We make many plans for customers who cannot come to the nursery. If you will send the dimensions of your property, location of house (with blue prints if possible), the direction it faces, trees, drives, walks, and a kodak picture, we can usually make a very satisfactory plan. For small detail plans through the mail we ask a deposit of \$5.00 which will be deducted when at least \$50.00 worth of stock is purchased. For simple suggestions through correspondence there are no charges, and we are always ready and pleased to render such service.

When to Plant

Shade Trees, Shrubs, and Fruit Trees, when handled with bare roots, are best planted in the fall after we have had sufficient frost to kill the foliage, or in the spring when dormant.

Evergreens, Shade Trees and Shrubs, when dug Balled and Burlapped (B&B), may be planted almost any time during the year if you can give them proper attention such as watering, cultivation and mulching.

Asparagus and Small Fruits may be planted in the fall if there is sufficient moisture and your soil is in good condition, otherwise plant in early spring.

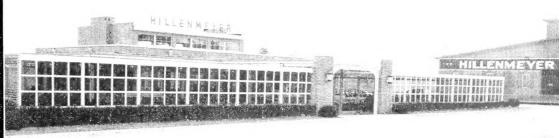

No Agents

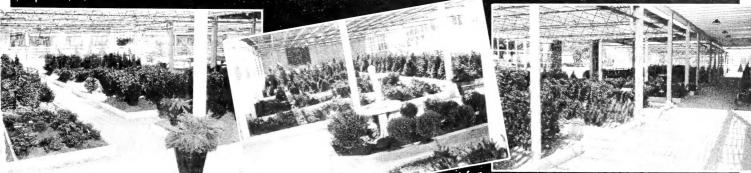

We sell direct and our contacts are usually made by appointments. Refuse to buy from anyone who represents himself or herself as our agents. WE HAVE NO AGENTS. When dealing direct you get full benefit of our facilities

A Few Words — About Our New Garden Center

Many of our customers visited us this past spring. We thank them for their interest and patronage. Others who have not visited have asked, "What is your Garden Center?" It has been described as a supermarket for plants. In addition to plants we have a complete line of insecticides, fertilizers, seeds, tools, lawn furniture and lawn accessories. We are attempting, with a few pictures on next page, to give you an idea of what our Garden Center is. Visit us-see it yourself.

Plants are easy to select from convenient display beds.

We dig daily. Healthy, well cared for plants await you.

Large assortment of plants on hand at all times.

Insecticides, seeds and Garden Books, ready to take home.

Complete line of lawn furniture, trellis, etc. Easy parking, front, rear and sides

Nice assortment of tools, pots, etc. Many appropriate gifts for your garden loving friends.

Your favorite brand of fertilizer, conveniently displayed.

Garden Center Open seven days a week from mid March to December 24th. Closed from noon Christmas Eve to mid March. Sunday hours: 10:00 a.m. to 5:00 p.m. — Closed Easter Sunday.

Caxus -YEW- Che Disease-Resistant Evergreen

 N^{O} family of Evergreens has gained such popularity in recent years as the Yew. Their dark, rich color, hardiness, variety of form, ease to transplant, adaptability, general freedom from disease or insects has merited this position. They all do well in the shade. We have one of the largest stocks in the South, and are using it in quantities for foundation planting and to replace Boxwood, which so often freeze.

TAXUS baccata repandens (Spreading English Yew). Low spreading form. Does well in de shade. Dark, rich green. 18 to 24 in	ach
T. cuspidata (Spreading Yew). Low, spreading type which is usually broader than high. Can pruned into compact form to look like Boxwood or made into a hedge if desired. Withsta heat and cold and is perfectly hardy in our climate. Can be grown in sun or shade. One the finest spreading Evergreens.	ınds
the threat oproading Everground

West Virginia,

Roses are fine and wish to say I am well pleased with your plants

See Prepaying Policy—page 31

Sizes

On spreading type evergreens, sizes listed indicate width. On upright types, the sizes indicate height.

EVERGREEN QUALITY

Every Evergreen has been transplanted to increase the root-system, and sheared to make it compact. Height does not indicate compactness and shapeliness, nor does price indicate VALUE—seeing is believing!

Csuga - HEMLOCK - Che All-Purpose Evergreen

QUALITY
as well as price
should be considered in buying Evergreens.
Ours are acclimated and
freshly dug.

- @ Foundation
- Hedge
- Screen
- Specimen

 T HIS grand tree has more uses than any Evergreen we sell. The fact that it grows rather rapidly, can be pruned to almost any shape, will tolerate both sun and shade, good color winter and summer, and is graceful, has made it a standout.

While Hemlocks prefer a good, rich, moist soil, they will grow almost anywhere. Keep well watered immediately after transplanting.

We have one of the largest and finest stocks in the entire country. We have a saying: "When in doubt plant a Hemlock."

FOUNDATION PLANTING

Few trees are better adapted to foundation planting than the Hemlock. While it will sometimes grow rather large if not restrained by pruning, it still can be kept within bounds very easily. They can be shaped into columnar, pyramidal or globular forms. Their graceful soft foliage is of good color and the trees will grow almost anywhere both in shade or sun if given a reasonable amount of moisture.

HEDGE

While a great many plants have been used from time to time in making hedges, there is none for all-round purposes which is superior to the Hemlock. Its rich green color in winter or summer, softness of texture, compactness, hardiness, ability to thrive in partial shade or open exposure, freedom from disease are some of its outstanding qualities. Our trees have been transplanted several times, and every one is a specimen. Can furnish in heights from 2 to 6 feet. Should be planted 3 feet apart or more, depending on size.

SCREEN

While Hemlocks are usually not quite so rapid in growth as the Pines and Spruces, they will soon develop into large, compact trees. If given good soil and ample moisture, a screen of Hemlock will soon surprise and delight the most fastidious. There is nothing more beautiful or satisfactory than a planting of Hemlock, be it a single row, large masses, a small cluster or even a single tree.

SPECIMEN

As a specimen, many consider Hemlock our handsomest Evergreen. Certainly there are few which retain the grace, dignity, and beauty of the entire tree from base to tip as the Hemlock. Small or large they are beautiful. If permitted to grow with little pruning the pendulous twigs drooping from the rather horizontal branches give a form which is dignified yet graceful. Yes, as a specimen we recommend a Hemlock.

		E	ach									Each

Lexington, Kentucky, Nov. 22, 1950.

I would like to express my appreciation for the work you did and the manner in which it was done as it was the most pleasant and satisfactory performance of the contract that I encountered in the construction of my home.

Tsuga Canadensis Canada Hemlock

Abies

Concolor

Hillenmeyer's Beautiful Evergreens

"The Green-Robed Senators of Mighty Woods"—Keats

TOR beauty both winter and summer, the Evergreen has no equal. Succeeding in almost any soil, with their range of color, form and habit of growth they find a place in almost any landscape. Our trees are all several times transplanted, and the finest to be had.

All Our Evergreens are Dug B&B

B&B means the plants are dug with a ball of earth and wrapped in burlap. This is the safest and best way to move them.

Abies - Fir

"I remember, I remember The Fir trees dark and high;
I used to think their slender tops
Were close against the sky."—HOOD

ABIES concolor (Silver or White Fir). The best of all the Firs. A native of the Rockies requiring a well-drained location. Has a deep root system and will withstand droughts and heat better than most Evergreens. The color ranges from a bluegreen to a distinct blue. Not quite as showy as the Blue Spruce but a much better tree for Southern conditions. Sometimes irregular in growth when young but develops into a compact, conical specimen. The needles are adranged around the branches. We consider it one of the outstanding Evergreens in cultivation for either a specimen or grouping. either a specimen or grouping.

Chamaecyparis (False Cypress)

A group of beautiful Evergeens including some of the most unique and interesting trees in cultivation. Valuable in garden or foundation planting. Prefers a moist acid soil but will grow almost anywhere when not too dry or alkaline.

CHAMAECYPARIS pisifera (Sawara Cypress).
The folioge somewhat resembles that of the Arbor-Vitce except that the tree is more graceful. Light green, silvery beneath, and of erect growth. Can be used in foundation planting or as a specimen. 4 to 5 ft. and 5 to 6 ft. only.

C. pisifera aurea (Golden Sawara Cypress). Has all the characteristics of the preceding except that the foliage is of a lighter green and is bordered with yellow in early spring.

C. pisifera plumosa (Plumed Cypress). Feathery green foliage, broad, symmetrical and dense. Stands shearing well.

Prices of the above 3 Chamaecyparis:

Sizes

On spreading type evergreens, sizes listed indicate width. On upright types, the sizes indicate height.

- **J. virginiana burki** (Burk's Silver Juniper). A silvery blue, compact, upright form of merit. Stands shearing well and is much prized for foundation planting.
- J. virginiana canaerti (Cancert Juniper). A fine, rather compact, pyramidal variety with tufted dark green foliage which is retained throughout the winter. Can easily be kept in bounds by slight pruning. Frequently has attractive silvery blue berries. Valuable for foundation plantings. Not available in 5-6 ft.

Juniperus Chinensis Pfitzeriana

- J. virginiana glauca (Blue Juniper). A rather loose growing variety which can and is usually kept formal by pruning. Its attractive blue-green foliage makes it stand out in any planting. Not available: 4½-5 ft., 5-6 ft., 6-7 ft. sizes.
- J. virginiana hilli (Hill's Dundee Juniper). A pyramidal, compact growing Evergreen of much merit. Bluish green foliage in spring, changing to plumlike color in early autumn. Stands shearing well. Excellent for formal planting.
- J. virginiana keteleeri (Keteleer's Cedar). A fairly compact, pyramidal tree, well proportioned as to height and spread. Its large, slate colored berries form a distinct contrast against the lighter, "fleshy" green foliage. Excellent for foundation or specimen. Will grow well in almost any soil.

Juniperus Communis Hibernica

Pinus Strobus

See Prepaying Policy—Page 31

Pseudotsuga Douglasi

Pinus - Pine

"Lord, let me be a Pine that lifts its hands up high To grasp the subtle secrets of the sky."—Edna DeRan

This grand family of Evergreens is of great economic importance. It is symbolic of strength, endurance and perseverance, and has long occupied a prominent place in art, literature and commerce. There are many forms, but the large, rugged, cone-bearing varieties are the ones which are of such importance. They do not like city conditions of soot, smoke and dust but are at home in the great outdoors. When small they are more or less compact and shapely, but as they develop, age brings a charm and beauty which few trees possess. They will grow in almost any well-drained soil. Plant Pines for permanency and beauty.

PINUS resinosa (Red or Norway Pine). A valuable large, quick growing tree, useful as a specimen or for screening. Needles 4 to 6 inches, glossy green. Hardy and holds a good color throughout the winter.

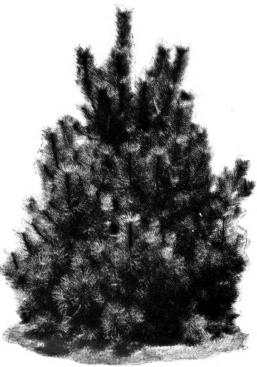

3	to	4	ft.																	. :		6.0	
4	to	5	ft.		. ,		,		,													7.5	(
5	to	6	ft.																		1	0.0	(
6	to.	7	ft.																		1	2.5	(

P. strobus (White Pine). One of our most beautiful native Evergreens, growing into a tall, majestic specimen. Needles 3 to 4 inches long, soft and flexible. Grows well in both dry and moist soil. It is a beautiful object planted alone and we think it one of the most desirable of our ornamental Evergreens.

2	to	3	ft.											\$5.00
3	to	4	ft.											6.00

2 to 3 f	t \$4.50	4 to 5 ft.	\$7.00
3 to 4 f	t 5.50		

P. pungens Kosteriana (Koster Blue Spruce). Sorry, sold out.

Pseudotsuga - Fir

PSEUDOTSUGA douglasi (Douglas Fir). Soft green foliage, resembling the Hemlock or Spruce, but of a blue cast. Makes a compact tree, and can be used as a specimen or in group plantings.

Each 3 to 4 ft. ...\$6.00 4 to 5 ft. ...\$7.50

QUALITY as well as PRICE should be considered in buying Evergreens. Ours are acclimated and freshly dug.

HOW TO PLANT

When requested, we will send absolutely free a book which, by word and picture, will show just how to plant a tree or shrub. The instructions are clear, and if followed, your plants should grow and thrive.

Thuja Orientalis Aurea Nana

Chuja -- ARBOR-VITAE

One of the most popular and extensively planted Evergreens. The branches are flat or grow in layers. To many, they are known as "pressed Cedars." While they prefer a moist soil or ample water they will grow almost anywhere. They vary in color from green to yellow and in shape from globe to pyramidal.

THUJA occidentalis globosa (Globe Arbor-Vitae).

Usually develops into a perfect, globe-shaped plant, the spread equaling the height. The foliage is light green and attractive. They are largely used for front-line planting, in urns, vases, on either side of a step and in formal work where symmetry is desired.

12	to	18	in.										\$2.50
15	to	18	in.										3.00

T. occidentalis pyramidalis (*Pyramidal Arbor-Vitae*). Strikingly attractive, narrow at its base, and retaining its shape without shearing. The color is deep, rich green. Like all Arbor-Vitaes it is easy to transplant. For corners, in front of pillars, background of group plantings and in urns, no dwarf Evergreen is quite so popular.

Buxus Sempervirens (Common Box)

With lustrous, green foliage, it is a plant that can be used in many ways and lends an air of dignity and permanence to its surroundings. As a hedge it gives character; in an informal group it has no rivals; it may be clipped or trained to pyramid form, globe shape or allowed to grow naturally. Box is used freely in window boxes, urns, and for garden edgings. Should be planted in good soil and fed with sheep or cow manure. Cultivate lightly and do not

SPECIMEN PLANTS

Each 15 to 18 in., B&B\$5.00 18 to 24 in., B&B ...

llex - Holly

ILEX crenata rotundifolia. A rather dwarf spreading variety of Japanese Holly, with glossy, nearly round leaves. One of the hardiest of the species and excellent for foundation planting or hedge.

I. glabra (Inkberry). A rather loose growing evergreen shrub which will succeed in either sun or shade. Leaves turn a somewhat purple shade in the fall. When planted in mass the shining black berries are most attractive. One of the hardiest varieties.

Prices of above varieties of Ilex:

Each 15 to 18 in. \$4.00

18 to 24 in., BGB 5.00

2 to 2½ ft., BGB 5.00

1. opaca (American Holly). Our native Holly which supplies the garden with year 'round greenness and richness and is prized so much at Christmas time because of its large, glossy leaves and striking red berries. Stands pruning well and can therefore be used as a specimen, in foundation plantings or as a hedge. Some trees bear berries (pistillate, female), while others (staminate, male) do not. It is necessary that you have a male Holly growing close by or one should be planted in every group for pollination. They will grow in partial shade or in the open.

Non-Berried Berried 3 to 4 ft., BGB 5.00 9.00

4 to 5 ft., BGB 5.00 11.00

Magnolia

MAGNOLIA grandiflora (Southern Magnolia). The popular evergreen tree Magnolia of the South. Waxy leaves. The large white blossom appears on older trees in midsummer. Not always hardy in Kentucky, but can be grown in protected places. Prefers rich soil. Each 2 to 3 ft., BGB\$5.00

MAHONIA aquifolium (Oregon Grape). The thick, glossy leaves resemble Holly, but are much larger and most attractive. Makes a compact bush, and when pruned severely every few years will become an indescribable mass of green and bronze foliage. Yellow blossoms in June followed by blue-black berries. Thrives in shade.

Mahonia

15 to 18 in., B&B 18 to 24 in., B&B

Nandina

NANDINA domestica. A semi-evergreen shrub with numerous, upright, reedlike stems. Each cane has a tuft of spreading light green foliage except the very young growth, which is tinted pink to copper. In August, white panicles of flowers appear, followed by masses of red berries in trusses. In autumn, strong coppery tints cover the foliage, making a most pleasing combination. While not entirely evergreen, it is nearly so.

Viburnum

V. burkwcodi (Burkwood Viburnum). A recent introduction and often called the "Evergreen Carlesi." The glossy, green leaves are retained most of the winter, though most of them will fall as spring approaches. The pink-tinged, white blossoms are borne in clusters and are exceedingly fragrant. An outstanding, hardy variety which merits a place in any garden or planting.

Broad-leaf Evergreens

S O MANY home owners do not know what this title means! Think of the Hollies and the Laurels as examples. We would miss the glossy green foliage of the Broad-leaved Evergreens in early spring, the deeper colors of summer, and the cheerful contrast they give to dull winter scenes, if they were removed from our landscape. They may be used as specimens, foundation plantings with tall evergreens or in the shrub border. You will be delighted with their beauty all the year—and pleased with the plants we supply.

Cotoneaster

COTONEASTER apiculata (Cranberry Cotoneaster). Low, spreading semi-evergreen shrub. Main attraction large orange-red berries in early fall.

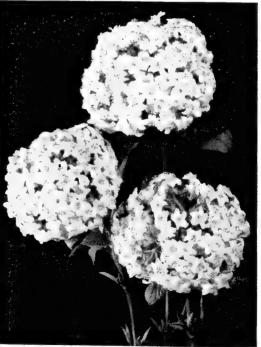

C. francheti. A semi-evergreen shrub, with gray-green legges borne on pendulous branches. Pink bloom followed by an abundance of orange-red berries in the fall.

Each 2 to 3 ft., B&B\$4.50 Each 18 to 24 in., B&B\$3.50

Euonymus

EUONYMUS patens (Kiautschovicus) (Spreading Euonymus). A valuable introduction from China. Leaves medium size, oblong, rich green, which persist throughout the winter. Small, white flowers followed by coral berries similar to our native Bittersweet. A rather spreading shrub which will grow in either sun or shade. One of our most useful Broad-leaf Evergreens.

Each Fach 15 to 18 in., B&B\$2.00 2 to $2\frac{1}{2}$ ft., B&B\$3.00 18 to 24 in., B&B 2.50

Viburnum Burkwoodi

Polygonum Auberti

Clematis

CLEMATIS jackmani. The most popular Chinese Clematis. Has large, purple flowers. Exquisite when it can be grown. \$1.25 each.

C. paniculata (Sweet Autumn Clematis). The small-flowered, fragrant, white "star" variety that blooms so profusely. Easy to establish and attractive in foliage as well as blossoms.

80c each; 5 for \$3.75.

Euonymus

EUONYMUS radicans (Common Winter Creeper Euonymus). A slow growing vine that adheres to masonry and remains deep green all winter. 80c each; 5 for \$3.75.

E. fortunei coloratus (Bronze Winter Creeper). More rapid growing than others of this family. It has long, vigorous shoots, well covered with medium, sharply pointed leaves. Clings exceptionally well and makes an artistic effect on a bare wall or chimney. Turns a rich bronze during the winter months chimney. months.

80c each; 5 for \$3.75.

E. fortunei vegetus (Big-Leaf Winter Creeper). Another evergreen clinging vine of moderate habit, perfectly hardy, and especially valuable because of the profusion of red berries that hang on for several weeks.

80c each; 5 for \$3.75.

Vinca Minor

Climbing and Creeping Vines

"Then the Wild Clematis Comes, With Her Wealth of Tangled Blooms."-Goodale.

These are the draperies that Nature gives us to cover porches, arbors, fences and to disguise unsightly buildings and old trees. Most varieties listed are strong growers, with either bright flowers in summer or brilliant berries in fall. Use vines freely to make the land-scape more beautiful. They thrive almost anywhere, cost little, and give a large return in comfort and pleasure.

Campsis Radicans (Trumpetcreeper)

A vigorous, woody vine, bearing scarlet flowers followed by long pods. It is a native of this section easy to establish, and grows luxuriantly. Valuable for covering old walls, trees, stumps, etc. 80c each; 5 for \$3.75.

Celastrus - Bittersweet

CELASTRUS scandens (American Bittersweet). An unusually attactive native vine because of its showy red berries in the fall and early winter. Vigorous. 80c each; 5 for \$3.75.

Lonicera Sempervirens

Hedera - Ivy

HEDERA helix (English Ivy). The most popular evergreen vine. Has large, deep green, glossy foliage, and is unexcelled for covering walls in shady and cool places, or used as a most satisfactory ground cover under trees or in shady places. Strong vines.

30c each; 4 for \$1.00; \$20.00 per 100.

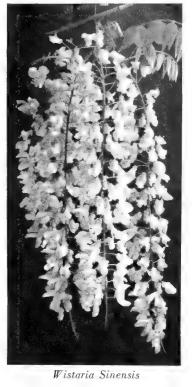

Hydrangea

HYDRANGEA petiolaris (Climbing Hydrangea). Slow growing deciduous vine. Lovely, four-petal white flowers appearing in June. Ideal for low walls. \$2.00 each.

Lonicera - Honeysuckle

An evergreen twining vine that is so much used to cover fences and trellises. Blooms continuously, is fragrant, and very easy to establish. Used largely to hold road-side banks from erosion and will flourish in poor soil. 25c each; 5 for \$1.00.

 $\begin{tabular}{ll} {\bf sempervirens} & (Trumpet\ Honeysuckle). & {\bf Attractive,\ trumpet-shaped\ flowers\ of\ bright\ scarlet}. \\ \end{tabular}$ 80c each; 5 for \$3.75.

Parthenocissus - Ivy

PARTHENOCISSUS quinquefolia (Virginia Creeper). The five-leaved lyy that is valuable for covering walls, old trees, fences, etc. It will grow anywhere and colors brilliantly in the fall. 80c each; 5 for \$3.75.

P. tricuspidata (Boston Ivy). The best of the self-clinging vines. Foliage is deep green and very dense, covering any object completely. Colors in the fall. Slow to start, but vigorous when established. 80c each; 5 for \$3.75.

P. lowi (Dwarf Boston Ivy). Like Boston Ivy it clings well. Small, dainty leaf that colors some in au-tumn. Ideal for restricted areas, or where light coverage is desired. \$1.25 each; 5 for \$5.75.

Polygonum - Fleece Vine

POLYGONUM auberti (Silver Vine Fleeceflower). A quick-growing vine with small, attractive foliage. The flowers are very small and lacy and when the plant blooms it is a perfect mass of silvery white; there is no other vine producing anything like the same effect. Blooms from August to frost. 80c each; 5 for \$3.75.

Pueraria - Kudzu

PUERARIA thunbergi (Thunberg Kudzu Bean). The It is marvelous how it will cover fences, pergolas, or similar objects. The large, purple flowers are sweetly scented. Belongs to the Pea family, and the foliage is dark green.

Wistaria

WISTARIA sinensis (Chinese Wistaria). A rampant, clinging vine that has the robust vigor of a wild Grape and the matchless beauty of a rare exotic. Flowers in large, drooping clusters. There is so much complaint of Wistaria not blooming we are offering plants that are grafted from blooming wood. Wistaria always needs to be well established to bloom freely. Purple and White. \$1.00 each; 5 for \$4.50.

Vinca Minor (Periwinkle or Trailing Myrtle)

A trailing evergreen plant used as a ground cover under trees or other shady situations.

Each 5 100

Pots ... \$0.30 \$1.25 \$20.00

Bare roots ... 25 1.00 \$15.00

Taxus Hedge

Hedges The Friendly Way to Fence

A thrifty, green hedge gives more character and beauty to home grounds than any fence ever devised. The first cost is usually less than an ordinary fence and trimming less expensive than painting. A hedge is an effective boundary marker, a wall of living green that protects the world within from the world without. The different hedge plants here listed are adapted to a variety of uses-and the plants themselves are in every way Hillenmeyer standard. All hedges should be cut back at least one-third when planting.

Chinese Privet (Ligustrum Sinense)

A rapid, semi-evergreen, loose growing plant that is desirable for hedge or screen. It prunes beautifully and can be kept to almost any height desired. When closely clipped the leaves are quite small and look almost like Boxwood. Occasionally freezes to the ground during a severe winter but always comes back with renewed vigor. Our plants are bushy transplants and should not be compared with light seedlings.

California Privet (Ligustrum Ovalifolium)

Upright in growth, dark, thick, almost evergreen foliage and one of the most popular hedge plants. Can be pruned easily and does not require clipping as often as the Chinese Privet and is somewhat hardier

Ibolium Privet (Ligustrum Ibolium)

This comparatively new Privet has proven hardy under the severe tests of the past few years. It has many characteristics of the California Privet though not as evergreen, and is as hardy as its other parent, the Ibota Privet. This superior Privet is a welcomed addition since it can be grown and sold at the price of California Privet.

Fragrant Bush Honeysuckle

(Lonicera Fragrantissima)

One of the most satisfactory tall-growing screen or hedge plants. We do not recommend it where you want to keep it under $3\,1\!\!/_2$ to 4feet. It is strong, vigorous, hardy, dense and holds its foliage well into the winter. The small, cream, bell-shaped blossoms appear in early spring and are quite fragrant. Normally growing into a hedge 6 to 12 feet. Requires little pruning and will thrive on almost any soil. Whether kept pruned or permitted to grow naturally, it is one of our most useful shrubs to screen out objectionable views or to give privacy to your property. Plant 12 to 24 inches apart, depending on the density desired. Shorten back at least one-half after planting.

Japanese Barberry (Berberis Thunbergi)

Each year sees an increased use of Japanese Barberry as a hedge plant. It is graceful, ornamental, serviceable, and hardy—four points that place it at the top of the list. The foliage unfolds in early spring, followed by yellow flowers, and later by red berries that remain all winter. In autumn the whole plant assumes a red tone. The drooping branches are thickly set with small spines that will turn cats or dogs. Japanese Barberry is excellent for foundation planting or for massing in corners. It thrives in bright sun and does well in

Deciduous Crees

For Shade and Beauty

"No place is complete without trees. A home without trees is charmless; a road without trees is shadeless; a park without trees is purposeless; a country without trees is hopeless."

W HEN hot summer sun beats down, you long for the welcome shade of a Maple, an Oak, or a brood-petaled Elm. But to have and enjoy such shade and shelter, you must plant ahead. The trees must be planted in fall or spring when the weather is cool. Then the roots take hold, the tree flourishes, and in a surprisingly few seasons the outspreading branches give the protection you desire.

We can supply—at very low prices—large trees that will give immediate effect, as well as smaller specimens from 6 to 15 feet high, which need a little more time to develop after moving to your place. Our trees are well grown, root pruned, and transplanted several times; they are truly Hillenmeyer standard.

"He Who Plants a Tree, Plants for Posterity"

There is no warrior who'll fight for life
More valiantly than a tree,
On rocky wind-swept ledge at mountain crests
Or on the fiercely elemental coastline by the sea.
—R. H. Weisbrod

Acer - Maple

ACER platanoides (Norway Maple). A vigorous, dense, round-headed tree, valuable for street or lawn planting. The large, dark green leaves turn a pale yellow in the fall. It resembles the Sugar Maple except the leaves are larger and it is not as tall growing. May be planted under electric or telephone wires, causing little interference.

A. platanoides columnare (Column Norway Maple). A valuable, new type of Norway Maple with upright habit of growth. For street planting, accent plant or background it should prove quite popular. Has regular Norway foliage. Available in 2½ in. size only.

Only.
A. platanoides schwedleri (Schwedler Maple). Similar to the Norway, except in early spring the foliage is a bright purple, changing to bronze and then to dull green. In the fall it turns bronze before defoliating. Not available in 1½ in.

Crimson King Maple

(Plant Patent No. 735)

A new, highly colored Maple. Foliage opening crimson in spring, changing and holding a purple color throughout rest of summer. A round headed tree similar to Norway Maple in habit of growth.

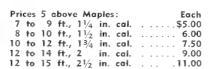

7 to 8 ft. (branched)

8 to 10 ft. (branched)

available in 2 in. and $2\frac{1}{2}$ in.

A. saccharum (Sugar Maple). Known everywhere and extremely popular. The tree grows to great size, erect, conical form, is perfectly hardy, withstands any subnormal weather conditions, and is adaptable to nearly all types of soil. The tree yields valuable timber, as well as maple sugar Foliage is deep green, turning to indescribable colors in the fall.

saccharinum (Silver Maple). Because its quick growth and good foliage, this tree is in great demand. The leaves appear early in spring, are light green on the upper side, silvery beneath, and re-main until late fall. Small flowers open before the leaves appear. For planting as temporary trees—that is, alternate between the hard-wooded and slower growers, such as Oaks, Elms, Sugar Maples, Gums, etc., the Silver Maple is highly recommended.

DECIDUOUS TREES—Continued

Carpinus - Hornbeam

CARPINUS pyramidalis (Pyramidal European Hornbeam). A much prized, narrow, compact, stately tree of columnar habit and Beech-like foliage. It is tough—will tolerate city conditions, transplants kindly and holds its leaves most of the winter. Stands clipping remarkably well and for this reason can be used for a tall hedge, pillars, or on either side of an entrance. Clipped or unclipped it attracts attention. We have some beautiful specimens and can think of no more appropriate gift to a friend than one or a pair of these beauand can think of no more appropriate grit
to a friend than one or a pair of these beautiful specimen trees. Each

Larix - Larch

LARIX europaea (European Larch). A tall, conical tree with soft, light green leaves which resemble the short needles of a Pine. Valuable for screen or ornamental purposes. Among the first trees to start growth in the spring. The small cones are quite effective in Christmas wreaths. in Christmas wreaths.

																\$8.00)

Wrap Shade Trees

All newly planted shade trees should be wrapped, for at least 1 year, with a double thickith a thickdouble thick-ness of burlap or heavy pa-per, from the ground line to the first branches to prevent sun scalding scalding.

Moraine (Locust)

(Plant Patent No. 836)

We are now offering this new thornless Honey Locust. It should not be confused with our native Locusts. It is a vase-shaped tree when young, but resembles the stately American Elm when older. The tree does not produce unsightly seed pods. It is a fast grower, happy on a wide range of soils, and easy to transplant. We are one of the few licensed growers in the United plant. States.

DECIDUOUS TREES—Continued

Magnolia

MAGNOLIA acuminata (Cucumber Tree). A pyramidal tree with spreading or ascending branches. Large, oblong, bright green leaves turning yellow in autumn. Fruit greenish yellow with upright petals 2 to 3 inches long. The young fruit much resembles a small pickle or cucumber and eventually turns a rosy red. A beautiful tree but a little difficult to transplant.

M. tripetala (Umbrella Magnolia). A wide spreading tree with stout branches and large leaves, sometimes attaining a width of 8 to 9 inches and 15 to 20 inches long. Flowers creamy white, fragrant, and 8 to 10 inches across. A native tree to most of eastern Kentucky.

Magnolia, Other Varieties. See page 23.

Malus - Flowering Crab

The Flowering Crabs have few rivals among the gorgeous spring-flowering trees. They are hardy, of easy culture, and will thrive in almost any soil. They are available in many shades and when used as specimens or mass plantings are most effective. Many kinds bear very ornamental fruit. No lawn is complete without one of these gems.

MALUS dolgo. 15 to 20 ft. Compact in form. White flowers followed with conspicuous red, medium sized, edible fruit. Very showy in August.

[16]

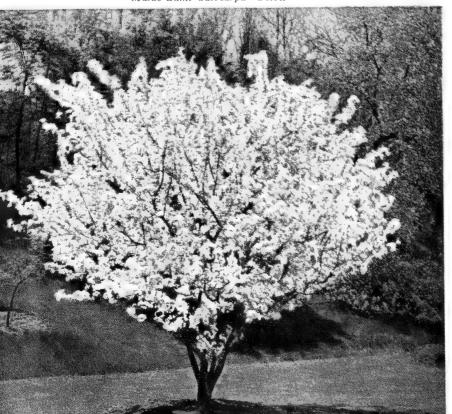

- M. eleyi (Ely Crab). 12 to 15 ft. The best of the purple or red-leaf Crabs. Covered in spring with clusters of large pink flowers, followed by showy purple-red fruit.
- M. ellwangeriana. 12 to 15 ft. Rather upright with pink flowers. Its brilliant red fruit with yellow blush in the fall is extremely showy.
- M. hopa (Rcd Flowering Crab Apple). 18 to 20 ft. Strong, healthy, upright tree, rosepink flowers. Fruit red inside and out.
 - M. ioensis plena (Bechtel's Crab). 12 to 15 ft. Rather slow grower with upright, spreading branches. Its double pink flowers resemble clusters of small Roses. Available in 4 to 5 ft. only.
- M. purpurea lemoni. A bronze-leaf type with semi-double carmine flowers, bears purplish red fruit in fall. Excellent for specimen or background.
- M. spectabilis (Chinese Crab). 12 to 15 ft. Upright form with semi-double, pale pink blossoms. Yellow fruit. Desirable.
- M. zumi calocarpa. The finest of all the white Crabs. The buds are pink but expand into lovely large white blossoms which literally cover the tree. Fruit small, bright red to orange.

DECIDUOUS TREES—Continued

Platanus - Sycamore

PLATANUS occidentalis (American Plane Tree). Our native Sycamore which is not appreciated. However, if you want a tree of rapid growth, rugged in character, picturesque in winter with its white bark, you should not overlook this grand old tree. Fine for woodland and paddocks. Tolerant of soot and smoke, and therefore is much used as a street tree in cities.

7	to	9	ft.,	1 1/4	in.	cal.							\$4.50

Populus - Poplar

POPULUS nigra italica (Lombardy Poplar). A tall, slender tree of rapid growth, reaching a great height and not to be confused with Carolina Poplar. Specimens often each 50 feet, with a spread of less than 10 feet and for this reason when trees are needed for narrow places, between buildings, congested lawns, narrow avenues, Lombardy Poplar may be used to advantage. Because of its great height and quick growth it is recommended for backgrounds, to add character to plantings or to offset straight or bare lines; for screening views, windbreaks—and for quick effects.

12	to	15	ft.				 				6.00

P. alba bolleana (Bolleana Poplar). Just because the Carolina Poplar is an enormous weed and nothing more, one should not discriminate against all the Poplar family. Bolleana Poplar has glittering green leaves, silvered underneath, and makes an attractive display against the sky when they are set in motion by a gentle breeze. The bark is gray, giving a pleasing winter effect. It is a fast growing, slender, columnar tree a little wider than Lombardy, which it resembles at a distance and for which it can be used as a substitute.

Prunus - Flowering Cherries

All except the large specimens listed below will be available in the SPRING ONLY. We will accept orders and ship at proper season.

These beautiful flowering trees from the Orient are among the most decorative in cultivation. They are of medium growth, free of disease and will succeed almost anywhere. There are many species and horticultural forms. We have tested many kinds, the best are as follows:

WEEPING FORMS

PRUNUS subhirtella. Single Weeping.

P. subhirtella. Double Weeping.

These beautiful, graceful trees are a mass of bloom in early spring. Grafted about 6 feet from the ground.

Prices above 2 varieties, \$6.00 each.

UPRIGHT FORMS

PRUNUS autumnalis. Single pink. Blossoms spring and fall.

P., Kwanzan. Double deep pink.

Prices of above 5 varieties:

P., Naden. Double light pink.

P., Mt. Fuji. Double white.

P. yedoensis (Yoshino). Single pale pink. Extra hardy and the one which is largely planted around the tidal basin in Washington.

How to Plant a Tree SET TREE IN TUB OF WATER WHILE DIGGING HOLE.

The Singing Leaves

But the trees all kept their council
And never a word said they,
Only there sighed from the pine tops
A music of seas far away.
—Lowell

Quercus-Oak

The Oak, with all its majesty, is the monarch of the woodlands. It is symbolical of strength, permanency and character. It has been interwoven, since time immemorial, with literature, art and craftsmanship. The family has world-wide distribution, containing many species, both evergreen and deciduous. Its timber is emblematical of strength and durability. By some it is considered of slow growth, but when given a congenial soil, develops rather rapidly in comparison with most hardwoods. When planted as specimens or street trees, varieties like Pin Oak, with their autumn coloring of yellow, orange and scarlet, are the source of enjoyment to him who plants, and elicits the admiration of the public. No lawn is complete without an Oak. an Oak

QUERCUS alba (W'hite Oak). One of the greatest of all the Oaks. Rather difficult to transplant and of slow growth, but "patience brings a perfect reward." Lecves silver to purplish red in autumn.

- **Q. macrocarpa** (Bur Oak). A native variety of slow growth, but becomes a stately tree well covered with thick, dark green foliage of heavy texture. For permanency it has no superior. Prefers a deep soil.
- nigra (M'ater Oak). A round-topped tree of good form. Will arow in either moist or dry soil. Foliage green until late fall.
- palustris (Pin Oak). The most popular of all the Oaks. Its beautiful glossy, deeply lobed green leaves change to gorgeous shades of purplish red and scarlet in the autumn. It is symmetrical, easy to transplant and of rapid growth. For street, avenue or as a lawn specimen there is nothing superior. Where a desirable hardwood tree is wanted we unhesitatingly recommed a Pin Oak recommend a Pin Oak.
- Q. borealis (Rubra) (Northern Red Oak). Not as compact nor does it color as brilliantly as the Pin Oak. Somewhat more difficult to transplant but grows in almost any soil when established. One of the fine

robur fastigiata (Pyramidal English Oak). An upright form of English Oak which is quite valuable for specimen or formal use. Of slow growth but worth the time required for development.

B\$12,00 (At the nursery) 8 to 9 ft., B&B

Spraying and Tree Feeding

We are equipped to spray and feed large trees, using modern equipment and scientific methods. If your favorite tree is being destroyed by insects or is starving, you may need expert advice and treatment. Write and consult us when in need of this service.

Like other plants, trees should be fed for best results. See our Plant Foods listed on inside back cover.

OVER INTEREST

DECIDUOUS TREES—Continued

Salix - Willow

SALIX babylonica (Babylon Weeping Willow). One of the most graceful of all the Willows. Makes a round-topped tree, and when it attains some size its long, pendulous branches are most effective.

- **S. blanda** (Wisconsin Weeping Willow). Of rather upright growth when young but as it attains height and age its long, drooping silvery branches make it the most effective of all the Willows. Rapid grower in either moist or other good soil. Fine for specimens or screens. Best of the Weeping Willows.
- **S. niobe** (Golden Weeping Willow). Best of the Golden Willows. Slender leaves, green above, silvery below. Twigs and bark golden.

Salix—Willow

developing to a shapely specimen.

Residence of Mr. and Mrs. Lloyd Mautz, Richmond Rd.

Dark green Taxus used against the Bedford Limestone house, gives contrast and attractiveness.

Blooming plants in the box and urns on porch, handiwork of the owners, make a lovely appearance around a beautiful home.

Buddleia-Butterfly Bush, "Charming"

Aronia - Chokeberry

ARONIA arbutifolia brilliantissima (Brilliant Chokeberry). 3 to 5 ft. A useful shrub combining good habits of growth, attractive summer and fall foliage, showy flowers and brilliant fruits. The medium size leaves are glossy green, turning bright red in the fall. The white flowers in early May are followed by fruit which becomes brilliant red in the fall and is very persistent. One of our best berry-bearing fruits. Will grow in sun or partial shade but requires ample moisture.

Each

18 to 24 in. \$1.00 2 to 3 ft. \$1.25

Berberis - Barberry

BERBERIS thunbergi (Japanese Barberry). 3 to 4 ft. Low, compact shrub with horizontal or arched branches. Twigs thorny, making it ideal for an almost impregnable hedge when mature. If left unpruned it will develop into a graceful, moundlike plant. The small green leaves come out early in the spring, along with the small yellow flowers. The foliage takes on a brilliant orange-scarlet when in the open and the flowers are followed by brilliant red fruit which persists throughout the winter. Will grow in almost any location.

Let Hillenmeyer Help You Plan

Flowering and Ornamental

"The beautiful lessons which 'blossoms' teach to children."-Chaplin

THERE is a place for flowering shrubs around every home—cottage, mansion or palace. A corner needs a little color, a foundation wall needs to be concealed, a gatage should be screened. In all these places flowering shrubs are adaptable and

From our fields this year we shall take the finest shrubs possible to grow—large, well developed, with good roots, and not by any means like the shrubs sold on "bargain" counters, which in many cases are of unknown origin. In fact, Hillenmeyer shrubs are heavy and carry several canes.

The size shown after each shrub name indicates the approximate height it should be expected to attain.

ABELIA grandiflora. (See page 10.)

Acanthopanax

ACANTHOPANAX sieboldianus (Five-Leaved Aralia). 4 to 6 ft. An interesting and very satisfactory shrub for planting in a shady place or under city conditions. Branches upright, prickly, arching and bearing bright green leaves in fives. If you have a troublesome situation, poor soil, shade or other adverse conditions give this shrub a trial.

Each 2 to 3 ft. \$1.00 3 to 4 ft. 1.25 4 to 5 ft.\$1.50

Aesculus

AESCULUS pavia (Red Buckeye). 6 to 10 ft. A southern shrub, recommended for naturalistic plantings. Its bright red spikelike flowers are produced in May, followed by distinctive fruit. Leaves compound, 4 to 5 inches long. Foliage not always the best but well worth planting because of its striking effect when in bloom.

Each 6 to 7 ft., B&B\$7.50

Aralia

ARALIA spinosa (Devil's Walkingstick). 10 to 15 ft. A large, vigorous shrub or small tree giving semi-tropical effect. The stiff, erect, very prickly stems bear compound leaves which may be 2 feet or more in length. The leaflets are small, giving a feathery effect to the whole plant. Small white flowers in July or August. A very effective shrub when properly used.

5 to 6 ft. \$2.00 4 to 5 ft.\$1.50 BENZOIN aestivale. See Lindera, page 22.

See Prepaying Policy, Page 31

Berberis Thunbergi Atropurpurea-Red Leaf Barberry

Calycanthus

CALYCANTHUS floridus (Sweet Shrub). 6 to 8 ft.

Few shrubs have persisted as well as the Calycanthus. Always found in "Grandma's" garden. Its sweet, aromatic reddish brown flowers are most appreciated. The blossoms are produced in late spring followed by large pods, filled with smooth brown seed. Use as a specimen or for planting in a larger border.

2 to 3 ft.\$1.25

quercifolia (Oak-Leaved Hydrangea). 4 to 5 feet. A distinct and handsome variety with short, stiff, spreading branches. Leaves deeply lobed, dark green above, silvery and downy beneath, which somewhat resemble an Oak. A very fine useful shrub.

Each

2 to 3 ft.

Ilex - Winterberry

ILEX verticillata (Common Winterberry). 4 to 5 ft. A deciduous Holly much admired for its brilliant scarlet berries which remain on the plant most of the winter. A spreading shrub which prefers a rather moist location and some shade. Staminate and pistillate plants should be set together for pollination.

Each 3 to 4 ft.

Kerria - Globe Flower Attractive shrub, native of Japan, with slender green branches and showy yellow flowers.

Will grow in any well-drained soil.

KERRIA japonica flore-pleno. Double.

18 to 24 in.

S1.25

Kolkwitzia - Beauty Bush

KOLKWITZIA amabilis (Beauty Bush). 6 to 10 ft. One of the most desirable introductions from Asia. Strong canes develop into groceful, sweeping branches. The flowers are shell to deep pink, with yellow markings, and produced in great profusion all over the plant. Might be called a much refined Weigela. Greatly admired.

4 to 5 ft.\$2.50

Lespedeza

LESPEDEZA thunbergi (*Thunberg Lespedeza*). An attractive, August-blooming, herbaceous shrub, with reddish purple, sweet scented, pealike flowers borne on arching branches, and lasting several weeks. Very graceful; makes a good "forward" plant for the shrub border. The tops may freeze in a severe winter, but come back each spring.

Medium plants Large plants

Ligustrum - Privet

For Hedge plants, see page 12.

LIGUSTRUM sinense (Chinese Privet). 6 to 10 ft. A small-leaved, almost evergreen Privet, much used for hedges, also very desirable for landscape work because of its rapid growth, good foliage and graceful branching. Is not particular about soil, and for screening and mass planting is unexcelled. Sometimes freezes during low temperature but comes back satisfactorily.

2 to 3 ft. shrubs\$0.60 3 to 4 ft. shrubs\$0.75 **obtusifolium regelianum** (Regel Border Privet). 6 to 7 ft. Low, spreading, and very twiggy, with dense foliage. Because of its graceful appearance, hardiness, and adaptability to any soil and shady places, it is the most widely used Privet for landscape work.

Lindera - Spicebush

LINDERA benzoin (Common Spicebush). 6 to 8 ft. Does remarkably well in moist, shady locations. Alternate, light green leaves turning pale yellow in the autumn. Small yellow flowers are produced in early spring before the leaves appear, followed by red fruit in late summer. Birds are especially fond of the fruit. Leaves and twigs are aromatic when crushed.

For Extra Large Shrubs-Write Us

Lonicera - Honeysuckle
LONICERA fragrantissima (Winter Honeysuckle). 8 to 10 ft. So called because of its vesy fragrant white blossoms in early spring. The foliage is deep green and glossy. Grows well in partial shade, poor soil, or cities where tender plants fail. Almost evergreen. Excellent for screens or hedges. One of our best and most useful shrubs. For Hedges, see page 12.
Each 2 to 3 ft \$0.75 3 to 4 ft
L. maacki podocarpa (<i>Late Honevsuckle</i>). 8 to 10 ft. A large, handsome shrub with pinkish blossoms followed by quantities of bright red berries which attract birds. Much prized for screen and mass planting.
L. tatarica (<i>Tartarian Honeysuckle</i>). 6 to 8 ft. Blooms in April and is one of the few early pink-flowering shrubs. Has bright red berries that stay on all summer or until taken by birds.
L. zabelli (Zabel's Honeysuckle). 6 to 8 ft. A fine, upright variety with clean, bright foliage and dark red blossoms, followed by a crop of bright red berries.
Prices of above 3 Loniceras: Each 2 to 3 ft. \$1.00 3 to 4 ft. 1.25 4 to 5 ft. 1.50
Magnolia
MAGNOLIA virginiana (Sweet Bay Magnolia). A fine, large American shrub with glossy, Laurel-like, almost evergreen foliage. The richly fragrant white flowers come in June and are followed by attractive fruits.
Each 2 to 3 ft., B&B\$4.50 4 to 5 ft., B&B\$6.50 3 to 4 ft., B&B\$5.50
M. kobus (Kobus Magnolia). A desirable upright shrub or small tree with short and slender branches. Pure white flowers 4 to 5 inches across appearing before the leaves.
Each 8 to 10 ft., B&B\$20.00
M. acuminata and tripetala. See page 16.
M. liliflora nigra ($Purple\ Magnolia$). Large flowers which are dark purple outside and light pink to purple inside. One of the hardiest and best.
M. soulangeana (Saucer Magnolia). All of the Soulangeana type have large Tulipshaped blossoms which expand early in the spring before the leaves. Very ornamental, and a garden treasure. The true Soulangeana is pink on the outside with white inside. The best known and most popular. Not available in 2 to 3 ft. and 3 to 4 ft.
M. soulangeana lennei (Lenne's Magnolia). Outside rosy or reddish purple. White within. Later than the species. Not available in 2 to 3 ft. size.
The above 3 kinds: Each 2 to 3 ft., B&B \$6.00 3 to 4 ft., B&B 7.50 4 to 5 ft., B&B 10.00
MAHONIA aquifolium. See page 10.

Syringa - French Lilac The so-called French Lilacs have been derived by crossing the best of the species,

especially Syringa vulgaris. There are many wonderful varieties and after much testing we have selected the following as the best for our section.

Adelaide Dunbar. Semi-double, purplish red. *Alphonse Lavallee. Double light purple.
Buffon. Single, mauve-pink.
Charles Joly. Double, purple-red.
*Charles Tenth. Single, reddish violet.

Congo. Single, reddish purple. Descartes. Single, clear pink. Edith Cavell. Double, white.

Ellen Willmott. Double, creamy white. Ludwig Spaeth. Single, large, deep rich purple-red.

*Michel Buchner. Double, pinkish liloc. *Mme. Casimir Perier. Double, pure white. President Grevy. Double, delicate blue. Vauban. Semi-double. Lilac-pink.

William Robinson. Double. Deep pink.
*These varieties are the only ones available in 4 to 5 ft.

Fruits - The Money-Makers are Coming Back to Southern Farms and Gardens!

Wisely, many are again planting fruits. Changes during the past few years have shown clearly that farmers and gardeners who had a few bearing fruit trees were making money—or if they did not sell the fruit, they certainly did not have to buy at the store or on the market at high prices. So, the man who "raised his own" was ahead any way you look at it.

For many years we have given special attention to fruit trees and small fruit plants. This year we offer with great pride and confidence our Kentucky-grown trees, produced with the utmost care and skill, from fruiting trees of known parentage. Hillenmeyer trees are good trees, honest trees, and sold direct from the nursery—not by agents whose commission you pay without getting a penny's worth of added value in the stock. As we sell direct to you, we do not ask fancy prices. prices.

We propagate our fruits under careful conditions, taking every precaution to have them true to name, for we believe dependability of variety is our very best sales argument. We guarantee every variety to be as described and hold ourselves ready to replace, without charge, any tree that accidentally proves untrue to name. In addition to this dependability, our trees are suited to nearby conditions as we test all varieties before offering them for sale.

No other fruit is so dependable and generally desirable as the Apple. They will thrive in almost any well-drained soil. Their period of ripening extends from early July until frost and they can be kept through the entire winter. For family use there is no other fruit so indispensable. With moderate care they will pay a handsome return on your efforts and investment. We have kept our list of varieties up to date and you can plant any of them with confidence. Arranged in order of ripening as to season.

Summer Apples

CLOSE. A new, early, red variety of outstanding promise both for home and commercial plantings. Ripens a few days ahead of Transparent. Hardy and bears when quite

Transparent. Hardy and bears when quite young. July 1-5.

EARLY TRANSPARENT. Waxy yellow; tart; excellent. Very early bearer; productive. Valuable for either home or market. Susceptible to blight on rich soil. July 5-6.

LODI. The best description of this variety may be to say that it is a larger, later Transparent. Pale yellow, tart, and ripens about a week later. Tree vigorous. Many think it will supplant Transparent as a commercial variety. July 5-10.

DUCHESS. (Often called "Oldenburg"). An old outstanding variety, productive, and best of its season. Ours is the "red" strain. Early bearing. July 10-15.

GOLDEN SWEET. Yellow. The best sweet we know. Vigorous grower; annual bearer, very

know. Vigorous grower; annual bearer, very productive. Hasn't a fault. July 20-30.

POLLY EADES. A Kentucky developed variety; while not well known, is superior to Maiden's Blush, yellow with slight blush. Bears early and quite productive. Plant on our recomand quite productive. Plant on our recom-mendation and you will never regret it. Au-

HYSLOP CRAB. The very best hardy Crab, producing a heavy crop of bright red tart fruit that is unexcelled for culinary purposes. Bears early. August 15-20.

Fall Apples

- **WEALTHY.** Large; shaded dark red; quality good, tender. Productive. Early to bear, and most satisfactory. Ripens over a long period and should be in every orchard. August 1 to September 1.
- McINTOSH. A fine fall or early winter kind that has won its way because of its productiveness and extra high quality. Bright red; smooth. Plant it liberally in Kentucky. Auaust 20-25.
- PADUCAH. A Kentucky product which very much resembles the Rome Beauty. About two or three weeks earlier, with more color. Prolific and a regular bearer. This variety stands at the top of the list as to production at the Kentucky Experiment Station. Sept.
- GRIMES GOLDEN. One of the best of fall Apples. A recent survey shows this the most popular Apple of any season. Fruit golden Matures early and is a heavy bearer. This variety is troubled with canker, shortening the life of the tree. We also offer "Double Grafted" Grimes Golden, which is a longer lived tree, at 25c extra. September 15-20.

Winter Apples

JONATHAN. An early bearing and long keep-ing Apple; red; medium size; quality good. Tree never large, but productive. Septem-ber 15-20.

BALDWIN. Red; lorge; good quality. Tree vigorous, highly regarded for eating and cooking. The commercial Apple of the East.

October 1-5.

RED DELICIOUS. As this extra red strain is such an improvement on the old Delicious we are propagating it entirely. When you ask for Delicious we give you this red strain at no extra cost. Fruit large, uniform size, and highest quality. Distinguished by the five lobes on the blossom end. Good for home or market. September 20-30.

YELLOW DELICIOUS. A yellow type of the old standard red Delicious which has become deservedly popular throughout the country. Bears young and of highest quality. September 30 to October 5.

Apples
RED STAYMAN. Dark rich red. Fruit large, good quality and keeper; early to come into bearing and productive. We think this the outstanding winter Apple for Kentucky. As the red variety is an improvement over ordinary Stayman, we are propagating it entirely and filling all of our orders from this selected strain. October 5-10.

TURLEY WINESAP. A seedling of Winesap which it somewhat resembles. Conical, rich red and of highest quality. A recent introduction, bears early and regularly. October 10-15.

10-15.

ROME BEAUTY. Large; red, tender, sub-acid. Early bearer and productive. A popular kind in most sections. October 12-15.

YORK IMPERIAL. A late keeping commercial Apple, shaded red on yellow skin. Flesh firm. Tree healthy. Regular and heavy bearer. Fruit sometimes lop-sided. Plant for profit or for home. October 15-20.

See Prepaying Policy, Page 31

	PRICE OF APPLES 2- and 3-year-old trees	s	
3 to 4 ft. 4 to 5 ft. 5 to 6 ft.	Each \$0.75 1.00 1.25	5 \$3.25 4.50 5.75	50 \$27.50 40.00 50.00

Not difficult to grow, but the trees do best in well-drained, rich soil. The sour varieties grow more readily than do the sweets, but you can have both if the location is satisfactory. Be sure to plant the trees as soon as they arrive. Press the soil firmly around the roots; tramp it hard.

Cluster and Sub-Acid Varieties

You may plant any of these varieties and you will be rewarded. This group seldom fails to bear a good crop.

EARLY RICHMOND. This old standard Cherry has been the favorite for years. The fruit, borne in clusters, is tart and very valuable for canning, pies, etc. Yields nearly every year and reddens the tree with its wonderful crop. It succeeds wherever Cherries will grow and is one of the earliest.

MONTMORENCY. Gradually supplanting Early Richmond because of its size. Except for being a little larger and later it is practically the same. Not quite as acid. Good to eat from hand. The tree is hardy, blooming late, and frequently will make a crop when the sweet varieties fail.

Sweets or "Heart" Varieties

This group grows luxuriantly, makes a fine showing for a few years, and then may die if not in soil that is exactly suitable. The following varieties are the hardiest of the group. You should plant two varieties of sweet Cherries for satisfactory pollination.

BLACK TARTARIAN. Perhaps the most popular of the sweet varieties. Fruit is large, black, and heart-shaped. High quality. The tree is vigorous in suitable soil.

MAY DUKE. Somewhat more acid than the other sweet Cherries, but of excellent quality and good to eat from the tree. Tree vigorous, medium size and productive.

NAPOLEON (Royal Ann). Large; yellow, tinged with red; firm. The most popular and best light colored Cherry for this section.

PRICES OF CHERRIES

A Gift for You

To help you get the best results from your plans and plants we will send absolutely free on request, a copy of this booklet.

"HOW TO PLANT"

The instructions are clear and cover planting, pruning, feeding, spraying, cultivating, and other details. This is a part of the service we give that you may have the greatest success and joy from Hillenmeyer stock. If other questions arise from time to time, write us—we are at your service.

This old standard fruit is still being planted by many. Blight is its chief enemy, and as it is worse on deep, rich soil, do not over-stimulate by feeding. Planted in the back lawn it will make a beautiful tree in foliage, blossom and fruit.

- BARTLETT. August 15. The favorite eating Pear of America, East or West. Large, beautiful yellow with soft blush; high flavor. Tree bears quite young. On account of its popularity everywhere it is the most sought after of the European Pears. More susceptible to blight than other varieties.
- KIEFFER. September 10 to 15. The most popular Pear for our section. Fruit is large, golden yellow, sometimes tinted red on the sun-exposed side. Flesh is firm, crisp, juicy and for canning purposes it is especially prized. From the tree it is not good to eat, and to properly ripen, gather carefully and place in dry place of even temperature. The quality improves and it is then desirable. For keeping longer, pack in shallow trays or wrap the fruit in paper and store in a room free from frost. In this magnetic can be kept until Christmas. manner it can be kept until Christmas.
- **LINCOLN.** Blight-resistant and bears regular crops. Perfectly hardy and quality almost equals Bartlett. Season of ripening about September 1st. Plant with confidence. Considered by many the best of the Pears.
- ORIENT. New introduction from Tennessee Experiment Station. Quality as good as Bartlett, it is said that it has never blighted in Knoxville area. Skin thick and slightly rough. Flesh is creamy white with good texture. Ripens about August 25th.
- SECKEL. September 15. This small, high quality, yellowish brown Pear is one of the most popular of the September fruits. Of melting, juicy, and sugary quality (frequently called the "Little Sugar Pear"). Tree is of slow growth but lives long and is needed in every home garden.

TWO- AND THREE-YEAR-OLD TREES 4 to 5 ft. 5 to 6 ft.

Plums

They grow almost anywhere—garden, chicken-run, or orchard. Us the trees are loaded with fruit, so it is wise to thin when too thick.

BURBANK. Late July. Fruit large, violet to light purple, with occasional shades of yellow. Flesh yellow, of excellent quality. For either canning or market this is the most popular kind. We believe it to be the hardiest and most prolific of the Oriental varieties.

DAMSON. A medium size, purple or blue Plum which is well known for its fine culinary uses. Damson preserve is the height of epicurean delight. It bears heavily and should be in every planting where Plums are wanted.

GREEN GAGE. Another outstanding old variety. It ripens in mid-August and its medium sized yellow-green high quality fruit makes it a standard by which others are judged. Tree moderate grower; healthy.

OMAHA. (Hybrid.) A promising kind, vigorous in growth and free from disease. Being an American-Japanese hybrid, it inherits hardiness and productiveness from each parent. Produces great crops of coral fruit, yellow fleshed and of good quality.

STANLEY PRUNE. A large, sweet, purple Plum with much merit. Introduced by the New York Experiment Station. Annual bearer, good for home or commercial purposes and the best of the "Prune" class.

THE HILLENMEYE

HOME GROWN, TREE RIPENED FRUIT **ALWAYS TASTES BETTER** PLANT YOUR OWN!

See Prepaying Policy, Page 31

Peaches

A home garden without Peaches? Just think what you are missing—luscious fruit from late June to mid-October if you select an early, a midseason, and a late. One tree of each is better than none, but if you have space, plant five of each class. For a commercial orchard you need a selection and several varieties -better write and ask our advice.

Planting and Care

The Peach is the quickest maturing of fruit trees, often bearing the second ar after transplanting. Plant only in well-drained soil but otherwise follow year after transplanting. Plant only in we methods recommended for other fruit trees.

When planting, prune rather severely, cut all side branches to 6 to 8 inches and head low. The tree gets top-heavy if allowed to develop a high head. Subsequent orchard pruning consists of shortening the terminal growth and keeping the tree compact and shapely.

Borers which live right below the ground line and frequently girdle the trunk should be removed annually. A chemical, Paradichlorobenzine (PDB), may be used to control this pest. Our orchard growing and nursery experience is always at your service. Write us your questions and we will try to help you.

Arranged in Their Order of Ripening

- MIKADO. (Free.) The best and most popular very early Peach to date. Medium size, round, yellow with red blush and of good quality. For best results should be planted with other varieties for cross-pollination. July 5-10.
- **REDHAVEN.** (Free.) Early. Hardy, firm and of excellent quality. An outstanding yellow commercial variety, almost completely covered with red. Should be in every orchard. July 10-15.
- RARITAN ROSE. (Free.) A New Jersey introduction of outstanding merit.

 Good quality, hardy, and the best early white Peach we know of. July 15-18.
- **GOLDEN JUBILEE.** (Free.) A new, large, early Peach, highly recommended by the Kentucky Experiment Station and other leading authorities. Yellow with a distinct blush. Quality fine. July 15-20.
- **COLORA.** (Free.) The outstanding feature of this yellow Peach is its hardiness. However, it is highly colored and of excellent quality. July 20-25.
- OTHELLO (July Heath). (Cling.) A new and better cling which we are growing instead of the old standard Heath. Has distinct blush, white flesh of good quality and is highly recommended by the Kentucky Experiment Station. July 25.
- **SOUTH HAVEN.** (Free.) Better color and quality than Elberta. Large, and ripens 10 to 14 days earlier. Has been much hardier than other yellow Peaches and because of our tests we recommend it highly. August 5-10.
- **PALE-HAVEN. (Free.) An excellent Peach introduced by the Michigan Experiment Station. A cross between J. H. Hale and South Haven. Large, midseason, yellow with blush. Good quality tree, healthy and hardy. August 5-10.
- **BELLE OF GEORGIA.** (Free.) White, with decided blush; excellent quality. Heavy and regular bearer. The best white-fleshed Peach for home or market. August 10-12.
- **ELBERTA.** (Free.) Fruit large, yellow, shaded with deep red. Elberta has been the standard Peach for years, and is just as good today. More than 80 per cent of commercial plantings are of Elbertas. August 10-12.
- **J. H. HALE.** (Free.) Fruit large, yellow, almost covered with red; more highly colored than Elberta; flesh firm, melting, and of best quality. Ripens August 10-15.
- **AFTERGLOW.** (Free.) This new, beautiful, yellow-fleshed Peach is well named because the soft amber-red covers the entire fruit. Hardy, excellent quality and very productive. The only Peach we have found worth listing, ripening after Elberta. August 15-20.

Fruit Tree Spray

Kolo Fruit Spray--manufactured by Niagara Chemical Co. controls most chewing and sucking insects and fungus diseases on Apples, Peaches, Pears and Plums. For bearing trees this "packaged spray" of ready-mixed ingredients is a convenient time saver.

ı	3	lbs.	(makes	25	gals.)	
ı	1	lb.	(makes	8	gals.)	

Currants

*ASPARAGUS

WASHINGTON. This is the best known variety. It is a strong grower, producing stocks of large size and of finest quality. The fact that it is rust-resistant makes it the ideal Asparagus for all. Our plants, produced on heavy soil, are superior to the little seedlings grown in sand. All plants are graded and are large, fleshy roots that, with proper care, will be ready to cut the second year. Our plants will grow off much better than imported plants.

Strong, 1-Yr. Plants: 25 50 100 \$1.75 \$2.75 \$4.50

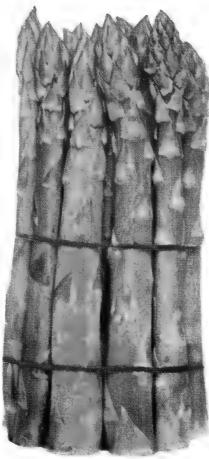

Ask for prices on larger quantities.

For Postage, Packing and Insurance Add 15%.

*CURRANTS

RED LAKE. By far the most productive of the many kinds we have tested. Color a brilliant red; large berries borne in long clusters along the stems; quality excellent. The white varieties have proved worthless in this climate.

Each 3 10 \$0.50 \$1.35 \$4.00

Washington Asparagus

*GOOSEBERRIES

DOWNING. Fruit almost round, large and juicy; best quality; whitish green color. Does especially well in the North.

HOUGHTON.Round, medium size; dark red when ripe; juicy, sweet.Thin, smooth skin.Bush is hardy, very productive, free from mildew, and the best for general purposes in this section.Prices of Gooseberries:Each310Either Variety\$0.50\$1.35\$4.00

*RHUBARB

HILLENMEYER'S FAMOUS KENTUCKY BLUE GRASS SEED

*BLUE GRASS

Here in the heart of the famed Blue Grass Section of Kentucky, the best seed in the world is produced. Hillenmeyer Seed is of the highest quality, both as to purity and germination. Do not sow light, chaffy material of weak germination and carrying many noxious weed seeds. Why gamble with poor seed? Plant the best.

*SUNNY LAWN MIXTURE

For sowir.g new lawns or where you have a thin stand we recommend our Special Lawn Mixture. This consists of Blue Grass, White Clover, and other varieties for quick effect.

*SHADY LAWN MIXTURE

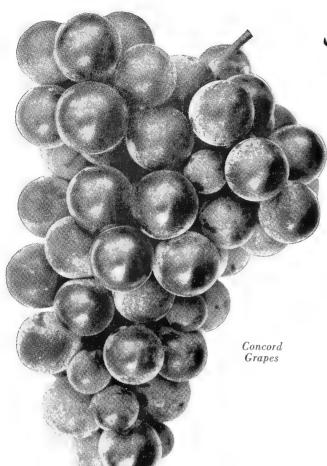

A scientific mixture of grasses to be used in shady locations on which the sun does not shine more than four or five hours per day. Sow 2 to 3 lbs. to 1000 sq. ft. on thin lawn, 4 to 6 lbs. to 1000 sq. ft. on NEW lawn.

1	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	~~~~	******	***************************************

Early Harvest Blackberry

Hillenmeyer's Small Fruits

* GRAPE VINES

Other crops may fail but you never lose all the Grapes—unless the boys get them. Grapes are a sure crop. Vines bear every year, need little attention except training, lots of sunshine, and plenty of plant food. In the home garden, use sheep manure or bone meal; in the vineyard, use well rotted manure.

2-year-old vines\$0.40 \$1.75 \$12.00

Black Grapes

CONCORD. The best general-purpose Grape grown.
Berry large; bunches shouldered and compact.
Should be the "backbone" of your planting. Special prices on large quantities.
FREDONIA. Outstanding new Grape, ripening a week or ten days before Concord. Berries and bunch large. Good quality, vine vigorous.

MOORE'S EARLY. An extra early variety. Medium bunch; large black berry. Vine is hardy, very reliable, and does well wherever planted.
SHERIDAN. An excellent, large Grape, ripening about a week after Concord. Very compact bunches but sometimes tries to overbear.

sometimes tries to overbear.

White Grapes

NIAGARA. The best white Grape. Bunch and berry large, meaty and juicy; flavor perfect. Medium season.

PORTLAND. The best early white for home and market. Vine moderately vigorous, fruit large and of excellent quality.

Red Grapes

CACO. An amber-red variety of unusual quality. It is a cross between Catawba and Concord, and is different from either. Vine vigorous and bears very early. Fruit sweet.

CATAWBA. Standard late red Grape that has lost none of its popularity. Season and quality make it indispensable.

LINDLEY. Of exceptionally good quality; lo midseason. large; ripening in on. Vigorous of vine and hardy.

LUTIE. Best extra early Grape of its color, and good size.

STRAWBERRIES

Strawberries should be planted only in the spring. When set in the fall, with alternate freezing and thawing, they usually heave out of the ground and die. We will have them listed in our spring literature which will also give cultural directions. The following varieties will be offered:

Blakemore Catskill Premier Tennessee Beauty Tennessee Shipper PLANT ONLY IN THE SPRING

Latham Raspberries

* RASPBERRIES

We have tested many kinds of Raspperries and after due consideration are
isting only four. These have proven best
under our Kentucky conditions and we
recommend them with confidence. Raspberries should be planted in every home
garden, as they require small space and
produce an obundance of our finest table
fruit. Contrary to general belief, Raspberries and Blackberries want good rich soil.

CUMBERLAND. Black. The best of its color for this section. Large, prolific and of good quality.

INDIAN SUMMER. Red. A repeat-bearing variety of merit. Produces a good crop of early berries and then another in the fall if weather is favorable.

LATHAM. Red. The best all-oround Red Raspberry. Large, prolific, good quality and firm. If you plant only one Rasp-berry, plant Latham.

SUNRISE. Red. A new early berry which is doing well in our section. About a week earlier than Latham. Not quite as large but of highest quality. Also hardy.

PRICES-ALL RASPBERRIES:

PLANT FOOD AND MULCHING MATERIALS

Fertilizers and Peat Moss are Sent Transportation Charges Collect-Cannot be Sent by Post.

Driconure

A perfectly blended combination of Nature's products—cow manure, poultry manure and peat moss. A complete fertilizer plus a safety factor that prevents burning and over-feeding. Driconure is clean and absolutely free from weed seed, insect life, fungus and useless filler. Practically odorless, finely ground and easy to distribute. An ideal, allorganic food and soil conditioner. Use a handful or so, worked in the soil around plants when setting or 50 pounds per 500 square feet.

71/2-lb. bag, 75c; 50 lbs. (2 bus.), \$2.50

Peat Moss

No other material is guite its equal for soil conditioning. It will retain 6 to 10 times its dry weight in water, and is free of all weed seeds. As a mulch, especially for Roses and perennials, it has no equal. Sold in bales of approximately 12 bushels which will cover 300 square feet 1 inch deep. Spaded in with manure it has the ability to absorb enormous amounts of fertility which the plants readily take up. Indispensable to good gardening.

POULTRY LITTER. Peat Moss is also the ideal, safe and sanitary material for bedding young poultry. \$5.00 per bale; 5 bales for \$23.75

Vigoro

Vigoro is not just an ordinary fertilizer but a complete, balanced, scientifically prepared plant food containing all eleven of the elements necessary for proper development. Use 25 to 50 pounds per 1000 square feet on lawns, one handful to each square foot around Roses, Shrubs, and Evergreens. Water-in after applying.

10 lbs., 90c; 25 lbs., \$1.60; 50 lbs., \$2.65; 100 lbs., \$4.25

Turf Builder

This is especially made for feeding grass, though it can be used whenever a complete fertilizer is needed. It is not at all chemical but contains vegetable matter, thereby giving immediate and lasting results. Because of its concentration will go much forther than most other fertilizers. If grass is tender, "woter-in." Can also be used for tree feeding and for this we recommend three (3) pounds per diameter inch. For broadcasting use 10 to 20 pounds per 1000 square feet.

25 lbs., \$2.50; 50 lbs., \$3.95; 100 lbs., \$7.85

PREPAYING **POLICY**

We wish we could set a schedule or prepay charges, on a percentage basis, as in the past, but since rate increases on practically all forms of transportation are pending, we are unable to do so. All items on pages 29 and 30, and Peonies can be shipped by Parcel Post. When you order these items only, include 15% for postage, rnese items only, include 15% for postage, packing and insurance, if you live within 200 miles of Lexington. On all other stock, please remit the price of the plants only and we will send with **TRANSPORTATION CHARGES COLLECT.** Please specify how you want shipped. If you order small fruits or Peonies in combination with other material, do not include postage, since entire shipment may be sent with TRANSPORTA-TION CHARGES COLLECT.

Delivery

No charge for local delivery in city and sub-divisions adjacent thereto. Truck delivery beyond this can usually be arranged satisfactorily, de-pending on quantity and distance. On orders to be shipped, prices are f.o.b. Lexington depots.

Guarantee

We guarantee every item to be true to name, up to grade and in good condition when it leaves here. As there are so many forces beyond our control, such as weather, soil and care, which may cause stock to die, we cannot be responsible for losses which occur. However, we will absolutely refund or replace without charge any stock which does not reach you in good condition, provided you report promptly and it has not been injured by public carrier. public carrier.

Substitution

When out of a variety of fruit trees, small fruit or Roses, we sometimes substitute, giving you the closest to it. If this is not satisfactory, mark "No Substitutes" on your order.

NO AGENTS

WE HAVE NO AGENTS who go from door to door or sell on commission. Appointments for landscape work are usually made by phone or correspondence. If you want to contact someone from our firm, please call or write. Our catalog is one of our salesmen.

Many unscrupulous and transient salesmen go about the country representing themselves as our agents. Do not believe them. While we do sell some stock to dealers, they must make their own terms as to price, collections, guarantees, etc. Since some of the material they sell often does not come from us, the way to get true-to-name Hillenmeyer stock is to buy direct. Again, WE HAVE NO AGENTS.

Peonles The Flowers for Everybody

There are few flowers which have been improved more than the Peony. From the old-fashioned reds and pinks, familiar in our grandmothers' gardens, we now have marvelous varieties with better color, form, and all-around quality. Peonies are often rated on the basis of 10 as perfect but we are frank to state that we do not always concur. We have tested hundreds of varieties so as to give our customers the best and find that some of the highest rated kinds just do not perform satisfactorily here in the South. The kinds offered can be planted with confidence.

They are at home and should be in every garden. Plant the crowns about 2 or 3 inches deep, use bone meal, see that they get sufficient water at blooming time and you will be more than pleased if you use HILLENMEYER'S CHOICE ROOTS.

STRONG DIVISIONS—YOUR ASSORTMENT

S.
STRONG DIVISIONS—YOUR ASSORTMENT
85c each; 10 for \$7.50
For Parcel Post and Insurance, add 15 per cent.
*SINGLE PEONIES

This type is distinguished by its five or more large petals surrounding a center of yellow stamens. Most are early and they stand wind and rain well. Very conspicuous

Clairette. Large white flowers of unusual beauty; prominent tuft of golden stamens.

Duchess of Portland. Delicate shade of flesh-pink; large.
L'Etincelante. Rose-pink, margined silver. One of the best.
The Moor Very attractive deep rich red of unusual beauty; stamens yellow and striking. *JAPANESE PEONIES

In these we have five or more guard petals surrounding a center of showy and abortive anthers. The second stage of development into the double type. **Akalu**. Guards deep American Beauty shade; petaloids conspicuous saffron-

vellow, margined rose.

Ruigegno. Dark maroon, with petaloids of most pleasing yellow. Very showy.

Snow Wheel. Large, pure white petals and petaloids. Our best white Japanese

*DOUBLE PEONIES

RED

Bunker Hill. Beautiful bright red with long, stiff stems. Has done exceedingly well with us.

Felix Crousse. Midseason. The most pleasing velvety red, fading to lighter shades as the blossom fades.

Karl Rosenfield. Late midseason. Large, showy, rich velvety crimson. Color striking.

Longfellow. A distinctive, fadeless crimson. Good foliage with strong, stiff stems. Early midseason. Dependable.

Mary Brand. Vivid crimson with silvery sheen which gives it added brilliance. stems. Ear Mary Brand. Midseason.

WHITE
Baroness Schroeder. Midseason. Delicate flesh-pink; fading to white with sug-

Gestion of heliotrope and gold.

Festiva Maxima. Early. The grandest white Peony. The extra large flowers are pure white, except petals tipped carmine.

Mme. de Verneville. Early. Desirable, free-blooming, should be in every collection.

PINK

Edulis Superba. Early. Deep rose. Valued for its fragrance and freedom of Georgiana Shaylor. Most exquisite shade of soft rose-pink. Midseason. Fra-

Lady Alexandra Duff. An unusual delicate flesh-pink. One of the most striking of all Peonies, with extra large, cup-shaped flowers.

Martha Bulloch. Silvery shell-pink at center, deepening to deep rose-pink.

Marria Bullock. Slivery Shell-pink at Center, deepening to deep rose-pink.

Late.

Mons. Jules Elie. Early to midseason. Large, compact; lilac-rose with lighter pink base petals; fragrant. Extra fine.

Reine Hortense. Midseason. Large, flat; flesh to shell-pink; very fragrant.

One of the finest.

One of the finest.

Samuel Hughes. Late. Fine upright variety with unusual style and color combination—silver-pink. Excellent variety.

Sarah Bernhardt. Late. Very large flowers of apple-blossom-pink, with silver-tipped petals. Vigorous.

Solange. Late. Large, compact. Outer petals delicate, waxy white, deepening toward the center with shades of golden brown. Free bloomer.

Venus. Midseason. Pale hydrangea-pink. Large.
